To: "Chun-Yu (Alex) Chen" <cchen29@students.claremontmckenna.edu>

The review of our genome announcement is back. Can you give it a try? I will go over it once you are done and resubmit once more.
You have to:
1.- Edit the manuscript, but keep track changes, do you use microsoft word?
2.- Write another document called response to reviewers, where you copy and paste their reviews and reply line by line while also being polite and thanking them for their time.

-Cesar

Subject: MRA00793-26 Decision Letter

Re: MRA00793-26 (Complete genome sequences of three co-occurring Pseudomonas isolates from California Botanic Garden topsoil)

Dear Prof. J. Cesar Ignacio Espinoza:

Thank you for the privilege of reviewing your work. Below you will find my comments, instructions from the MRA editorial office, and the reviewer comments.

Please return the manuscript within 60 days; if you cannot complete the modification within this time period, please contact me. If you do not wish to modify the manuscript and prefer to submit it to another journal, notify me immediately so that the manuscript may be formally withdrawn from consideration by MRA.

Revision Guidelines
Word Count: Please ensure that when revisions are made you are still below the word count. When reducing the word count, priority must be given to the requests in this review as well as items on the MRA checklist.

To submit your modified manuscript, log into the submission site at https://mra.msubmit.net/cgi-bin/main.plex. Go to Author Tasks and click the appropriate manuscript title to begin. The information you entered when you first submitted the paper will be displayed; update this as necessary. Note the following requirements:

• Upload point-by-point responses to the issues raised by the reviewers in a file named "Response to Reviewers," NOT in your cover letter.
• Upload a compare copy of the manuscript (without figures) as a "Marked-Up Manuscript" file.
• Upload a clean .DOC/.DOCX version of the revised manuscript and remove the previous version.
• Each figure must be uploaded as a separate, editable, high-resolution file (TIFF or EPS preferred), and any multipanel figures must be assembled into one file.

For complete guidelines on revision requirements, see our Submission and Review Process webpage. Submission

of a paper that does not conform to guidelines may delay acceptance of your manuscript.

Data availability: ASM policy requires that data be available to the public upon online posting of the article, so please verify all links to sequence records, if present, and make sure that each number retrieves the full record of the data. If a new accession number is not linked or a link is broken, provide MRA production staff with the correct URL for the record. If the accession numbers for new data are not publicly accessible before the expected online posting of the article, publication may be delayed; please contact production staff (MRA@asmusa.org) immediately with the expected release date.

Publication Fees: For information on publication fees and which article types are subject to charges, visit our website. If your manuscript is accepted for publication and any fees apply, you will be contacted separately about payment during the production process; please follow the instructions in that e-mail. Arrangements for payment must be made before your article is published.

ASM Membership: Corresponding authors may join or renew ASM membership to obtain discounts on publication fees. Need to upgrade your membership level? Please contact Customer Service at Service@asmusa.org.

Thank you for submitting your paper to MRA.

Sincerely,
Annette Rowe

Microbiology Resource Announcements

Reviewer #1 (Comments for the Author (Required)):

This manuscript describes the isolation and sequencing of three Pseudomonas strains isolated from soils near different plant species. The manuscript gives a nice overview of the isolation procedure, but it is not clear to me, if only these three isolates were obtained (out of how many?) and or what was the rationale for the selection criteria for sequencing? (reaching an OD of 0.6?). Were any controls instituted to make sure contamination during the enrichment process was not an issue.

Some other details that should be included in the MS:
Please clarify if DNA was sheard for the ONT library preparation and if so how.
What ONT Flow cell/device was used for sequencing
In Table 1, what does line 3 mean ? (it is the same name as the isolate?)
Line 4, this is the biosample number not the genome accession number. Assemblies start with GCA_XXXX
Check consistency of italicizing: Table one closest species and make sure to italicize the genus Pseudomonas. (e.g., line 11)

Reviewer #2 (Comments for the Author (Required)):

This is an excellent announcement that contains most of the information needed to publish these genomes. I commend the authors on their attention to detail. A few minor comments:

- ensure all species and genus names are italicized as appropriate (see line 19)
- specify which flowcell type was used for sequencing, and total number of raw reads obtained
- the first row in Table 1 (Isolate internal name) can be removed as it is redundant with the column headers.
